

## **D.Shawcross Ltd Pitch Roof Refurbishments**

D.Shawcross can offer pitch roof refurbishments tailored to suit an individual's preference and budget.

We can significantly improve your properties aesthetics by simply removing your old tiles and replacing them with a concrete/ clay or even steel tiles.

Felt underneath the tiles is renewed in breathable membrane to allow the roof void to breath thus eliminating condensation from attacking the tile battens which is a major contributor to decaying battens.

Ridge, Hip, Valleys and Verges can be renewed utilising an increasingly popular "dry fix" method as opposed to traditional sand and cement. Dry fix or mechanical fix eliminates the need for mortar bedding and has a number of advantages for example offering a neat, maintenance-free finish which does not crack or crumble with all the benefits of a secure weather resistant finish.

Tiles are available in various sizes and colours plus contrasts can be created when installing contrasting ridge to your choice of coloured tiles making a structure more visually eye-catching.
